## DETAILED ACTION

### *Response to Arguments*

1. Applicant's arguments, see Remarks, filed May 19, 2005, with respect to the rejection(s) of claim(s) under 102 and 103 have been fully considered and are persuasive. Therefore, the rejection has been withdrawn. However, upon further consideration, a new ground(s) of rejection is made for claim 19.
2. Claim 19 does not have a cold start injector or multipart injection during cold start. It just claims activating the spark igniters and retarding at least on spark igniter different from the others,

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. Claim 19 is rejected under 35 U.S.C. 102(b) as being anticipated by Hoshiba et al. (US/5197430).
5. Hoshiba et al shows an engine in FIG. 6(a), wherein after the start of the engine 15, the ignition timing is first advanced for a time period designated by "A" until the engine temperature reaches a predetermined value and is then controlled in multiple steps so as to gradually retard the timing until warm-up is completed. The time periods "A" and "B" during which the ignition timing is held at a constant spark advance are stored in memory 48 and are calculated on the basis of the temperature of the engine

15 when it is started, as illustrated in FIG. 6(b), and also in connection with a set of correlated temperature values predetermined by experimental results in the design and development of the system and preprogrammed in the memory 48 relating the temperature where the sensor 47 is located to the actual engine temperature at given time periods after the engine 15 is started. The memory 48 may be loaded with a number of sets of correlated temperature values for different sensor locations. Since the ignition timing is varied inherently the sparkplugs will have different retarding.
